ZEBRA

Aurora VGR Studio

Use 3D vision to guide your robot to pick any object from anywhere.

Aurora VGR Studio unites Bin Picking Studio & Locator Studio into a unified vision-guided robotics platform.

Advanced AI capabilities locate and process complex parts with human-like adaptability.

Industry-leading Photoneo 3D sensors provide high-resolution data capture.

Integrated with Zebra Design Assistant.

For any industrial application

Automate everything from depalletizing boxes in logistics to complex pick & place of industrial workpieces in manufacturing.

For any robot-to-camera setup

Supports single or multi-sensor setup, fixed mounting or on-the-robot, static scenes or in motion, one perspective to merging multiple point clouds.

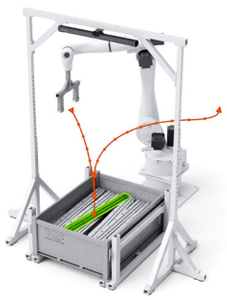

Scale deployments effortlessly

Compatibility with all major robot brands, an intuitive visual interface, and the ability to easily reuse robot cell setups makes deployment at scale easy.

One modular platform, for any application.

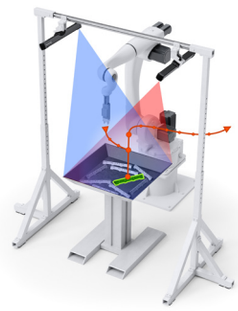

Randomly stacked, overlapping parts, deep bins. Guide robot confidently without collisions.

PATH PLANNING &
COLLISION AVOIDANCE
AUTOMOTIVE/MANUFACTURING

Complex part geometry. Wide-angle workspaces. Merge 3D scans form multiple angles.

MULTIVIEW
AUTOMOTIVE/MANUFACTURING

Mixed box types. Depalletize randomly stacked pallets.

AI
ANYPICK FOR BOXES
LOGISTICS

Totes, even deformed. Determine exact position and orientation.

AI
ANYPICK FOR BOXES
LOGISTICS

Whole layers of goods at once. Delayer at high speed.

LAYERPICK
LOGISTICS

The Most Versatile
Vision-Guided Robotics Software

Integrated with
Zebra Design Assistant

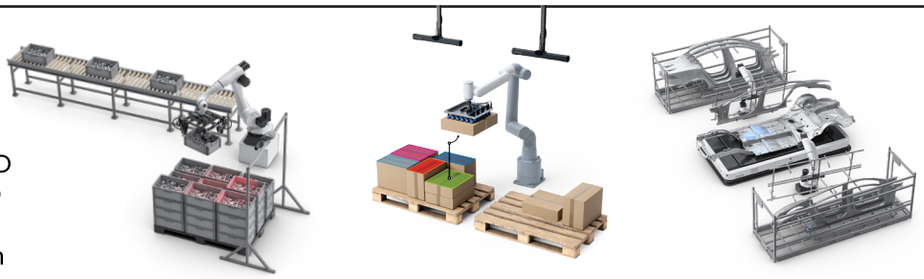

3D Vision for any need

Capture high-quality 3D data across a versatile range of scanning volumes from letter-sized objects to multiple euro-pallets. Available for both scanning of static objects or those in rapid motion on a conveyor belt.

Algorithms to find any object

Identify objects using AI, their CAD model, a model created from a 3D scan or through a hybrid method and determine their exact position and orientation for picking.

HYBRID AI CAD

Robot and gripper integration made simple

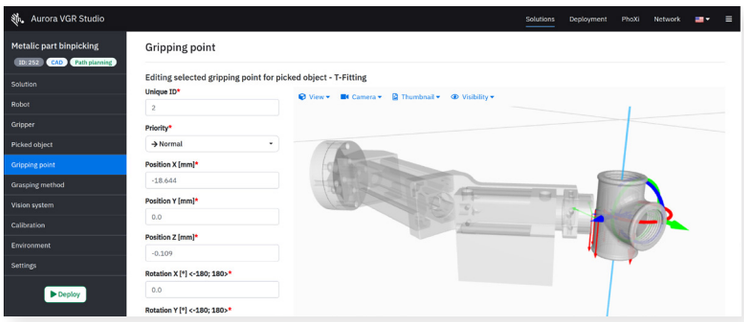

275+ robot models across 11+ brands. Support for multiple gripper configurations to optimally plan robot paths avoiding collisions with the environment.

ABB YASKAWA FANUC OMRON
Kawasaki Robotics · OMRON · NACHI · DENSO
KUKA · DOOSAN · HD HYUNDAI ROBOTICS · RobCo
STÄUBLI · MITSUBISHI ELECTRIC Changes for the Better · UNIVERSAL ROBOTS · ESTUN

No-code, visual, robot cell setup

Design, safely simulate, and instantly deploy precise picking solutions without any risk using a web-based interface. No programming knowledge needed.
